Seismic Interpretation Expertise & Technology

Working seamlessly towards Geocellular Modeling

Technology

In this study, we attempt to illustrate the application of some very innovative software tools available to us in PaleoScan. The PaleoScan suite, together with tools available in GeoTeric, allow us to move traditional data sets seamlessly through:

PRE-CONDITIONING
STRATIGRAPHIC INTERPRETATION
WELL ANALYSIS
SEQUENCE ANALYSIS
STRUCTURAL INTERPRETATION
FACIES INTERPRETATION
3D PROPERTY MODELING
GEOCELLULAR MODELING

Well-log based 3D Property Models, guided by seismic data volumes and supported by cross-plot analysis, open up a spectrum of integrated workflows to the interpretation team.

Shear Impedance data remains a critical requirement to more advanced classifications. In this study we had very limited shear data, but have attempted none-the-less to walk the viewer through what we think are valuable workflows.

Geology

Outcrops, Cores
 Surface geology
 Well-logs
 Structure & tectonics
 Sedimentology
 Stratigraphy
 Subsidence history
 Depositional models
 Source rock analysis
 Reservoir parameters
 Production data
 Horizons, Faults
 Seismic attributes
 Seismic facies
 Geostatistics
 Neural Networks

Geophysics

Horizons, Faults
 Seismic attributes
 Seismic facies
 Geostatistics
 Neural Networks
 AVO/AVA
 Rock physics
 Rock mechanics
 Post-stack inversion
 Pre-stack inversion
 $V_p, V_s, \rho, \lambda, \mu$
 Bulk modulus, K
 Young's modulus, E
 Poisson's ration, σ
 PI, SI, EEI, ψ

Petrophysics

Mineral models
 Lithofacies
 Rock physics
 Rock mechanics
 V_p, V_s
 λ, μ, ρ
 Bulk modulus, K
 Young's modulus, E
 Poisson's ration, σ
 TOC, Pressure, Temp
 Fracture gradients
 $S_w, S_w(irr), \phi_t, \phi_{eff}, \kappa, \eta$

Inverse distance

Seismic facies volume

There is a strong dependence on well control and data quality

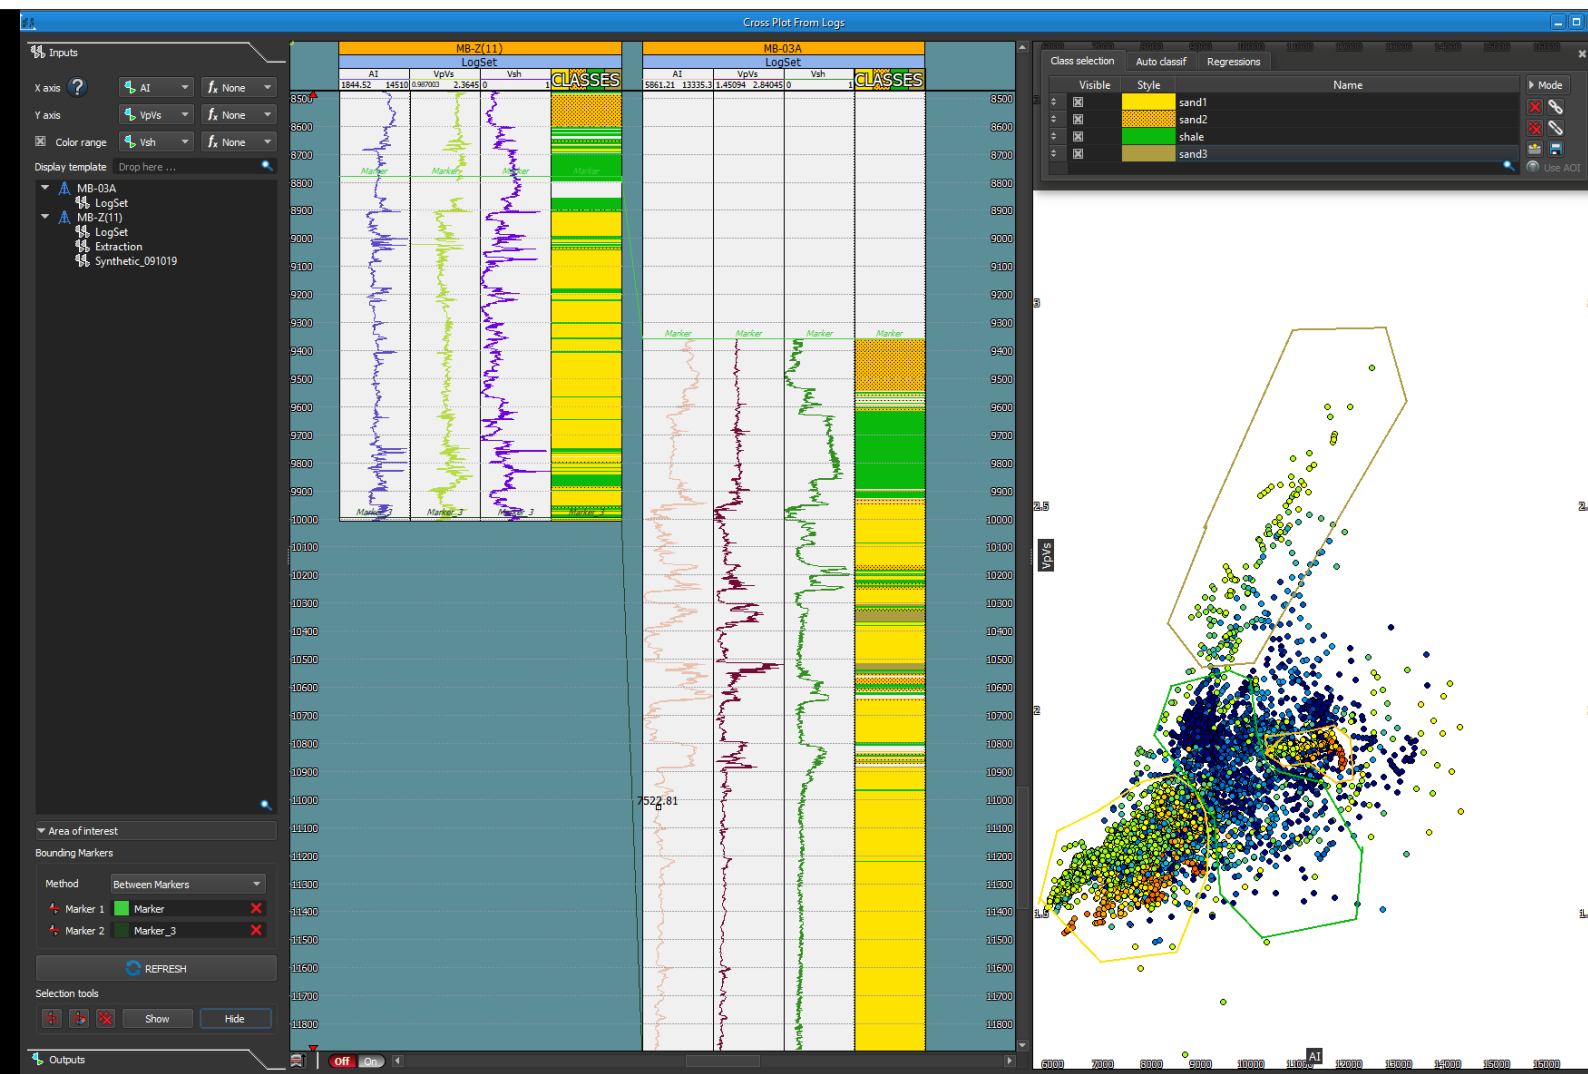

Lithofacies are defined based on well-log cross plots of Vp/Vs and AI using the wells MB-03A and MB-Z(11)

- 3D PROPERTY MODELING
- GEOCELLULAR MODELING

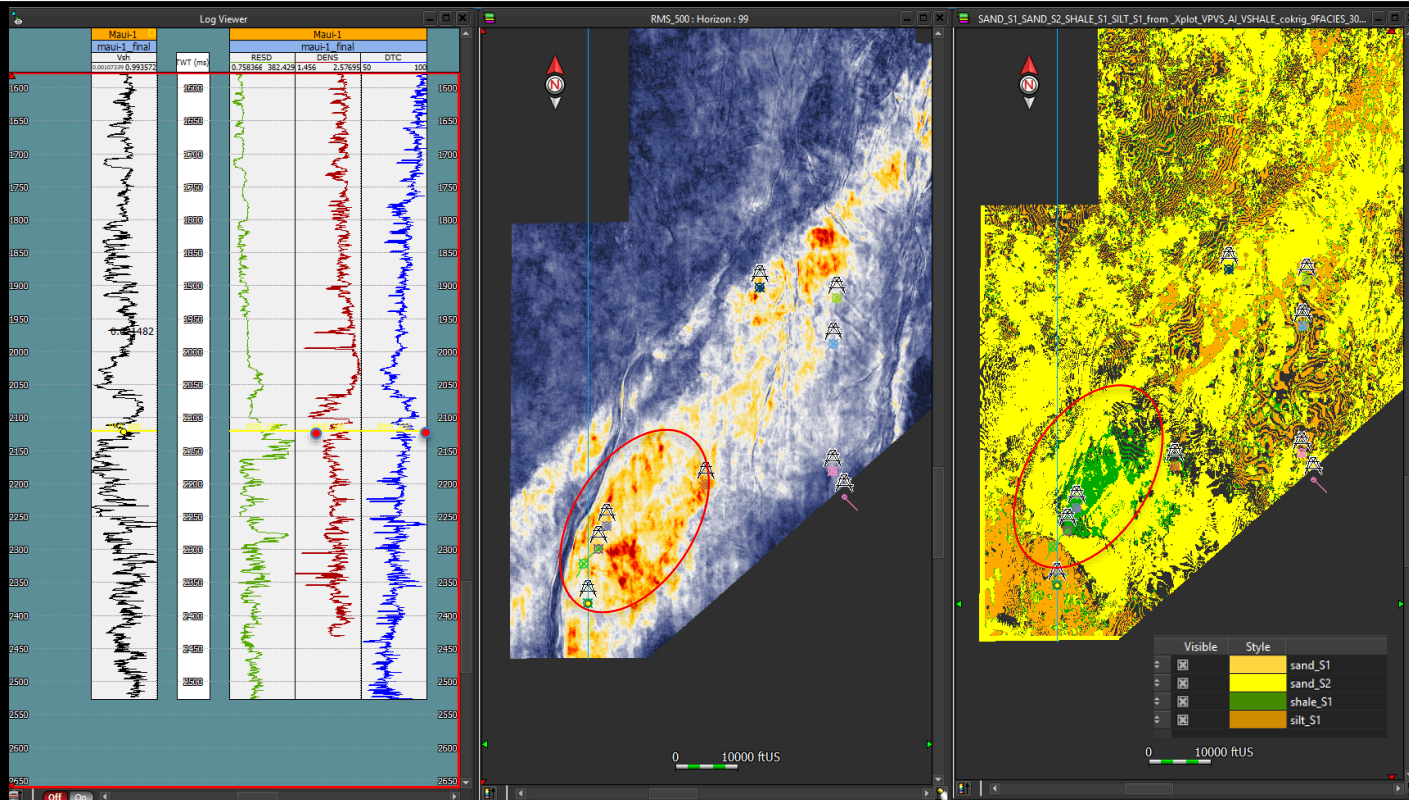

Note: having only 2 wells with Vp, Vs logs creates a major limitation. However, we will still examine workflows keeping in mind the danger of circular reasoning.

Note: we have created Vp/Vs and AI volumes by co-kriging the well-log properties, and recognize the risk of very limited data, and potential circular reasoning..!
